To: ham-digital@ucsd.edu

I am trying to upgrade the firmware on an MFJ 1270 from version 1.1.3  
to 1.1.8. I have already upgraded the memory to 32k but am having  
trouble getting the EPROM to work.

Thanks,

Emery, KB7TER

In rec.radio.amateur.digital.misc, "Terry Stader, KA8SCP" <p00489@psilink.com> writes:

>Brian... you know we have the gateways alive and well here in New  
>England. Those strange 44. stations are probably other hams from the  
>rest of the ampr.org world trying to talk to you!

Not according to our Switch Managers, Bill, N1NWP, and Jerry, N1HAT. They say all that data is only flying between my station and the Switch site. Period. Why, I have no idea!

>Give it a try... Luck can show you how to use the CT or MIT gateways. Enjoy!

Yeah, I've used 'em fer mail and for the "live" Converse mob scenes...fun stuff!

>> And if I log onto the BBS (as SysOp, anonymous, whatever, I get "permission  
>>denied" when I try to do a dir, etc. I've stared at FTPUSERS for hours, and  
>>draw a blank. I believe my NOS.CFG is okay. Urghhh!

>Now... I've seen this, too. What order does NOS look thru the FTPUSERS  
>file at... from top-to-bottom or from bottom-to-top? I know in the Mac  
>version, you have to make sure that your "catch all" permissions like  
>anonymous must be at the end... or else your users will never get  
>anything more than those permissions.

I've tried making "palindrome-shaped" FTPUSERS files (ie, same "anonymous" stuff on top and bottom, special permissions in the middle, but to Noah Vale.

Cheesh--you'd think this stuff was written by a bunch of talented amateurs or something!

What is wrong with the MFJ1278??  
I found the 1278 an interesting controller, and was thinking of  
buying one in the states (Prices much lower than here in Europe).  
Do you have any bad experiences with the 1278? Please let me know before  
buying....

I personally Think the "Apologizing Sysop" is the one with the last laugh.  
The lid who sent the threat out is probably so buried in flames that he'll  
probably have to do a mass delete without reading them! (Then we should be  
able to sue him right?)

So whats the official definition for "PBBS"? I figured it was "Packet BBS".  
It sure ain't "Public" or why do I have to have a license?

From: news-mail-gateway@ucsd.edu  
Subject: Various flavors of TCP/IP  
To: ham-digital@ucsd.edu

What is the difference in the various flavors of TCP/IP?  
I have no interest in being a BBS, Digipeater, Internet Gateway, etc.,  
I would just like to run as a TCP/IP node. What is the difference  
between JNOS, NOS, NET, PA0GRI, KA9Q, etc.

Or am I just reading too much and it breaks down to Kenwood, Icom and Yeasu -  
all effectively doing the same thing, just different colored cases?

Thanks.

I really don't think publishing the mods or owning the equipment is illegal. Just listening to the conversations is illegal. Many old tv sets tune the cell phone band just fine. Nothing stops me from BUILDING my own box. But I can't listen to the conversations.

There is no mention of publication media protection. A Leaflet is a publication media, all it has is right to 'free speech' except ... ECPA still prohibits the dissemination of radio mods that describe receiving Cellular information. Read the document Hank, ignorance of the law is NOT bliss ...
